

# PDF to Keynote

and using Beamer to generate Keynote presentations

---

Rémy Müller

August 29, 2019

# Usage

Usage:

```
pdf2keynote pdf_path [-o keynote_path]
```

If your pdf is generated from Beamer with the option

```
\usepackage{pgfpages}
```

```
\setbeameroption{show notes on second screen=right}
```

Then the text notes from the second screen (the right half of the pdf page) are extracted as presenter notes in Keynote.

## A Slide Without Notes

Just an empty slide without notes

## A Frame with itemized notes

One can also use rich text for comments, for example

```
\note {\begin{itemize}
    \item one
    \item two
    \item three
\end{itemize}

$$\nabla H(x) = \partial H / \partial x$$

}
```
